(973) 768-5577
NJ DEP Lic# 90008B**

Bug-Less Pest Control LLC will apply EPA approved materials according to label directions for the control of bed bugs. Currently, there are no approved materials that eliminate bed bug infestations with a single treatment. Bug-Less PC will apply an approved residual pesticide in conjunction with a Growth Regulator Control insecticide.

Your residence will be treated with a chemical for the infestation of bed bugs. Please follow all instructions fully to insure that the treatment is successful.

- 1. Tenants must vacate the premises for at least 4 hours after the end of the treatment.**
- 2. All beds must be stripped of the sheets and mattresses and box springs must be stood up on its edge against the wall.**
- 3. All clothing must be removed from drawers and closets, washed in hot water, dried on High heat and placed in plastic bags.**
- 4. All floor space must be cleared and all movable items such as shoes and toys must be stored above the ground.**
- 5. All pests must be removed from the premises. All fish tanks must be covered, pumps and filters turned OFF!**
- 6. All open food must be placed in closed containers or removed from the area.**

After treatment has been completed, sanitation (including frequent changing of bedding) and vacuuming will help control the bed bug population. The purchase of mattress and box spring encasements will assist in the prevention of infestations.
